

Nucleic Acid Extraction Kit For TB-DNA Extraction

The Nucleic Acid Extraction Kit is intended for rapidly extracting Tuberculous bacillus DNA from sputum, chest water, pus, lavage fluid, tissues samples, especially from low-abundance samples. Realizes the high-throughput processing of parallel samples. The whole operation process is safe, convenient and no need for organic reagent. The extracted nucleic acids are in quantity and highly purified. The kits can be used in the fields of diagnostics, genomics research, disease detection, food safety, and forensic identification, etc.

FEATURES

High Efficiency

Extraction of more than 500copies/ml of mycobacterium DNA samples

High Precision

Coefficient of variation (CV%) is less than 5%

Various Specimen types

Sputum, chest water, pus, lavage fluid, tissues, ect

More Sensitive

Up to 1ml sample adding can greatly enhance the limit of detection

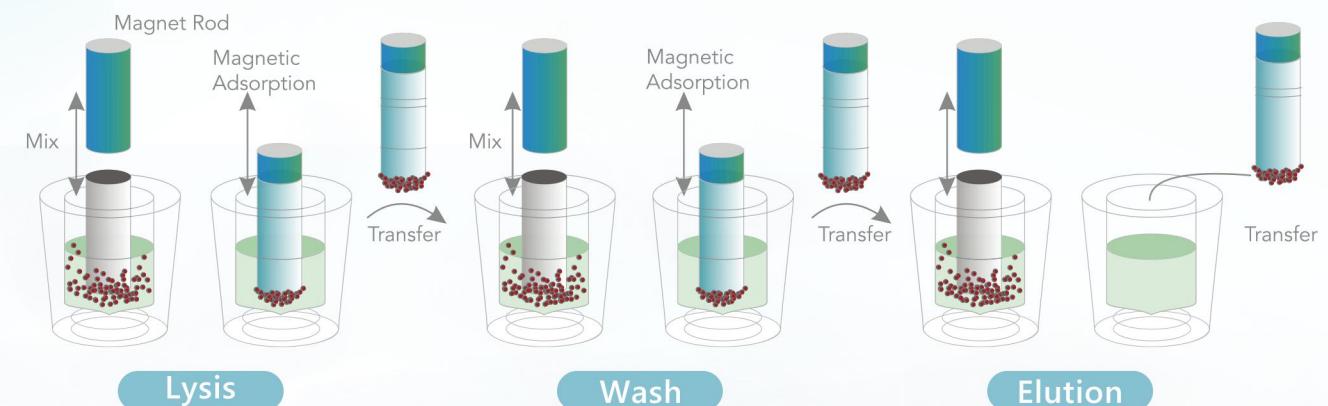

More Convenient

The liquefied sputum samples can be directly added for extraction without additional operations

MAGNETIC BEADS METHOD

ORDERING INFORMATION

Cat.No	Method	Specification	Sample Type	Test Item
T136H	Magnetic Beads method	20T/Box (Pre-filled), 5T/Plate × 4plates	Sputum, chest water, pus, lavage fluid, tissues, ect.	TB-DNA
		20T/Box (Pre-filled), 1T/Strip		

APPLICATION AREAS

Clinical diagnostics

Genomics research

Food safety

Forensic identification
